Java Interview Test
Search Engine App

- Using the provided Eclipse project, produce a console application that can take user input and search the provided text file resources for matches.

- Results should display the list of matching files and their occurrence counts, sorted by occurrence count (desc).

- Text files should be evaluated/indexed once, at application startup.

- Evaluation Criteria:

  - Input parsing - robustness, choice of reader/tokenizer

  - Indexing - design and optimization (multi-threaded?)
