Java Interview Test

Search Engine App

- **Using the provided Eclipse project, produce a console application that can take user input and search the included text file resources for exact matches.**

- **Results should include the list of matching file names and their occurrence counts, sorted by occurrence count (desc).**

- **Text files should only be evaluated/indexed once, at application startup.**

- **Evaluation Criteria:**
    - **Indexed data model - design and optimization**
    - **Accuracy of search results**
    - **Unit test coverage**
    - ***Bonus* - optimizations to any provided code**
